Anthony Cortinovis

Senior Software Engineer

Strasbourg, France | hello@acortino.me | acortino.me | linkedin.com/in/acortino | github.com/acortino

Last updated: November 2026

Summary

Senior Software Engineer with 10+ years of experience building and operating production backend, distributed, and real-time systems. Experienced in Java, Python, Kafka, and gRPC, with a focus on performance and reliability.

Technical Skills

Backend : Java, Spring Boot, Python, Go, Django, SQL, REST APIs

Distributed and Real-Time Systems : Kafka, gRPC, WebSocket, Streaming Pipelines, Event-Driven Architecture

Cloud and Infrastructure : AWS, Kubernetes, OpenShift, Docker, OpenTofu/Terraform, CI/CD

Frontend and Testing : Angular, TypeScript, JUnit, Mockito, Unit Testing

Professional Experience

Senior Software Engineer — Freelance

Belfort, France | Feb. 2026 – Present

Building a patient management and surgical decision-support platform spanning longitudinal follow-up, imaging, AI-assisted reporting, and clinical analytics.

- Designed Spring Boot services and REST APIs for patient onboarding, longitudinal follow-up, scheduled assessments, and postoperative outcomes tracking.
- Developed clinical workflows for DICOM imaging, surgical eligibility decision trees, and comparative analytics across patients, procedures, and clinical outcomes.
- Built a real-time transcription and clinical information extraction pipeline using WebSocket audio streaming, Java, gRPC, and Python/Whisper workers.
- Integrated AI-assisted pathology analysis and eligibility assessment into preoperative decision-support workflows.
- Automated containerized deployments using Docker, AWS, Kubernetes, Helm, OpenTofu/Terraform, and CI/CD.

Technologies: Java, Spring Boot, Angular, Python, WebSocket, gRPC, Docker, Kubernetes, AWS, OpenTofu/Terraform, CI/CD

Senior Software Engineer — Uniphore

Palo Alto, CA, USA | Feb. 2023 – Jan. 2026

Built and optimized production real-time AI services for sales intelligence.

- Redesigned an AI processing pipeline from file-based exchange to chunked streaming, reducing end-to-end latency by 84%.
- Optimized streaming buffers in a production Java service, reducing memory usage by 70%.
- Owned a Python real-time sentiment analysis service integrated with Kafka and gRPC microservices.
- Built a SCIM synchronization service integrating Okta, Active Directory, Auth0, and internal identity systems.

Technologies: Java, Spring Boot, Python, Kafka, gRPC, Microservices, SCIM, Active Directory

Software Engineer / Sole Technical Owner — Hexagone Behavioral Technology (acquired by Uniphore)

Strasbourg, France | Aug. 2020 – Feb. 2023

Sole technical owner of a real-time multimodal emotion analysis platform, from development through production operations.

- Owned backend, frontend, infrastructure, deployment, production troubleshooting, and GDPR-related technical requirements as the sole technical employee.
- Built Kafka and WebSocket pipelines for real-time audio/video processing and ML inference, achieving under 200 ms latency for live emotion display.
- Integrated voice, facial, text, and video ML models with data scientists, turning research outputs into production features.
- Integrated a deepfake detection model for a France TV project and maintained production OpenShift deployments.

Technologies: Python, Django, Kafka, WebSocket, Angular, TypeScript, OpenShift, Machine Learning Integration, Real-Time Audio/Video Processing

Software Engineer — Oxycar

Mutzig, France | Mar. 2018 – Jul. 2020

Developed and maintained cross-platform carpooling applications for iOS and Android.

- Maintained Angular, TypeScript, and NativeScript mobile applications, integrating messaging, geolocation, payments, and REST APIs.
- Built CI/CD pipelines for App Store and Google Play releases, reducing manual release steps.

Technologies: Angular, TypeScript, NativeScript, Mobile, CI/CD

Software Engineer / Co-founder — Blueanthill
Belfort, France | Sep. 2016 – Mar 2018
Co-founded a social media analytics product used to explore election-related datasets.

- Led development of a platform for ingesting, indexing, searching, and visualizing 20M+ tweets during the 2017 French presidential campaign using Node.js, Elasticsearch, and AngularJS.
- Managed engineering priorities, product decisions, and stakeholder demonstrations as co-founder.

Technologies: Node.js, AngularJS, Elasticsearch, Real-time Analytics

Selected Projects

ARSO — Autonomous Remote Space & Weather Observatory | github.com/open-arso

- Building an open-source platform for satellite tracking, sky imaging, weather sensing, and remote observatory nodes.
- Implemented a Go CLI integrating CelesTrak satellite data, pass predictions, and machine-readable output for automation.

Technologies: Go, Python, Docker, Edge Computing, Telemetry, Distributed Systems

Education

Engineering Degree, Computer Science - Information Systems
Université de Belfort Montbéliard, Montbéliard, France | 2013 - 2016

Bachelor's Degree / Licence, Web and Mobile Development - System Administration
IUT Belfort Montbéliard, Belfort, France | 2012 - 2013

Languages

French (native), English (fluent), Italian (B2)
